

Project Project Report: Milestone 4

Name: Import Data using Transform Maps (Spreadsheet)

Milestone: Milestone 4 - Creation of Reports & Dashboards

Assignee: Shahana S

Complexity & Duration: Medium | 40 Minutes

1. Executive Summary

The primary goal of Milestone 4 is to establish data visualization and reporting tools in ServiceNow based on the imported employee records. This involves creating multi-perspective reports from the Employee Test table and consolidating them into a unified Employee Analytics Dashboard for simplified monitoring and data-driven decision-making.

2. Completed Scope & Key Subtasks:

Subtask 1: Report Generation

Created three visual reports targeting key operational metrics from the custom Employee Test (u_employee_test) database table:

- * Employees by Department:

- * Source Table: Employee Test

- * Chart Type: Pie Chart

- * Grouping: Grouped by Department with Aggregation = Count.

- * Employees by Location: Visual representation analyzing employee distribution by geographic location.

- * Employee List Report: Tabular view summarizing employee details.

Subtask 2: Dashboard Configuration

* Access Control Setup: Adjusted Access Control Lists (ACLs) for pa_dashboards by enabling Admin Overrides = True to grant backend dashboard creation permissions via PA_DASHBOARDS.FORM.

* Dashboard Creation: Configured and saved a new centralized workspace named Employee Analytics Dashboards.

Subtask 3: Integrating Reports to Dashboard

* Widget Addition: Shared and embedded all three generated reports (Employees by Department, Employees by Location, and Employee List Report) into the newly established dashboard.

* Visual Polish: Arranged report widgets side-by-side and adjusted color themes for enhanced clarity and administrative visibility.

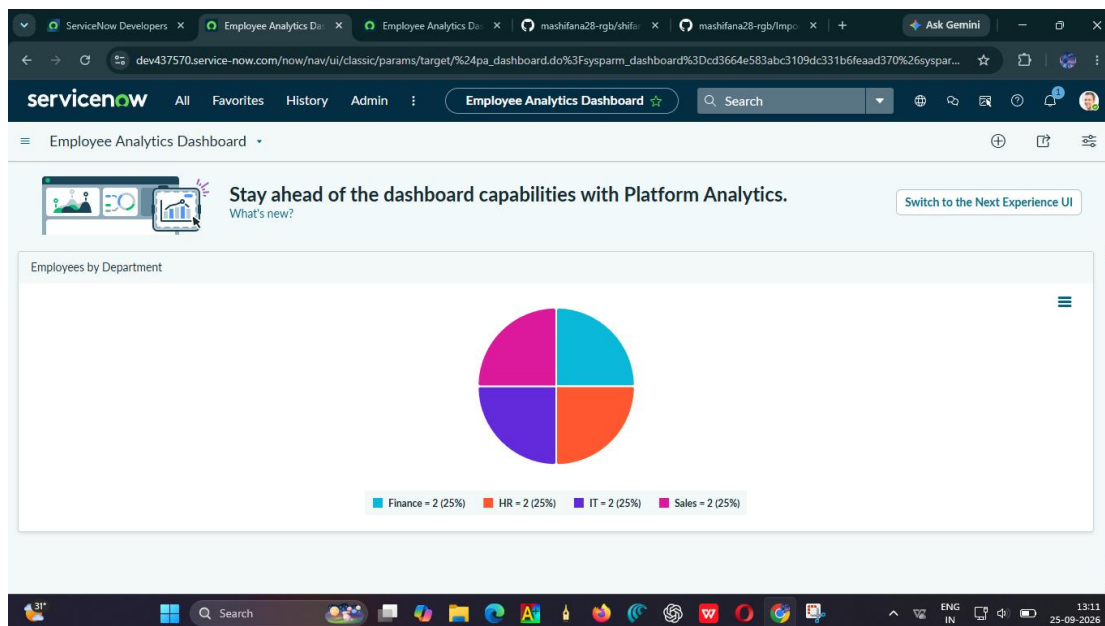

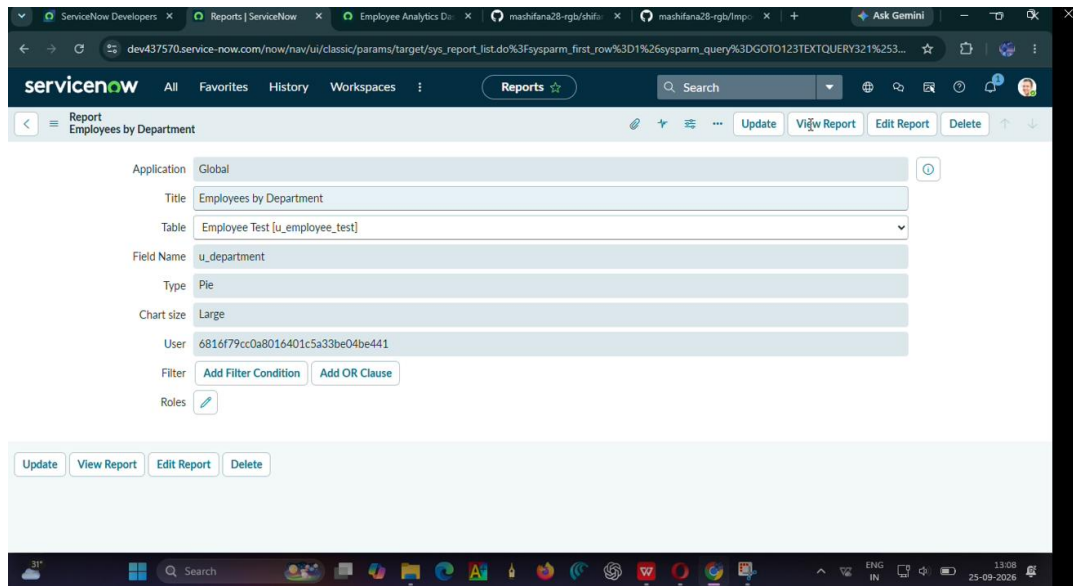

3. Overall Project Conclusion:

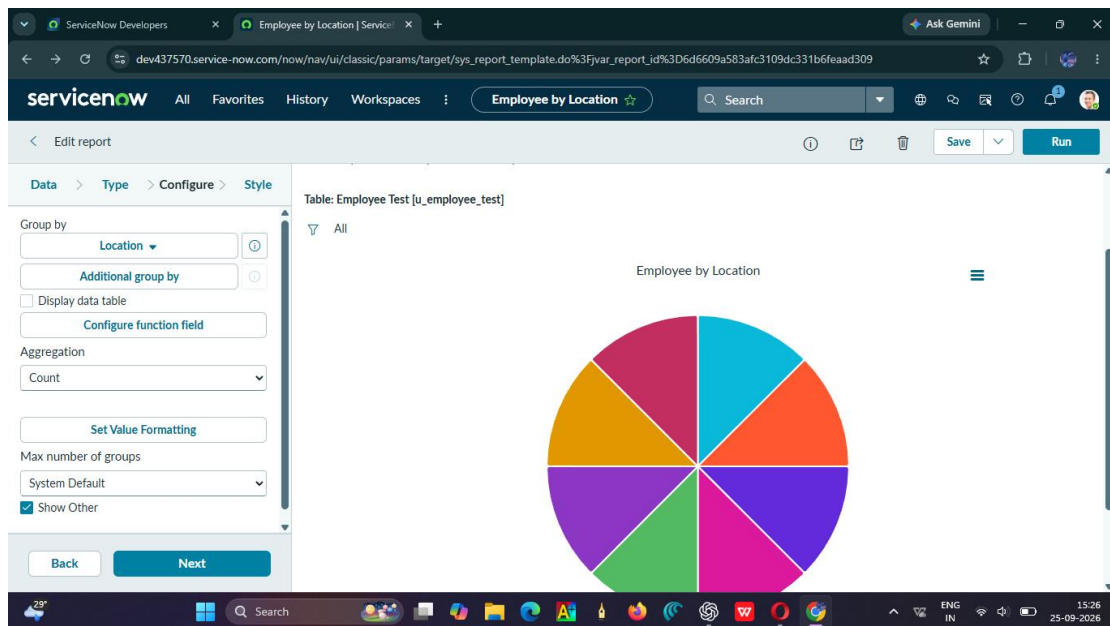

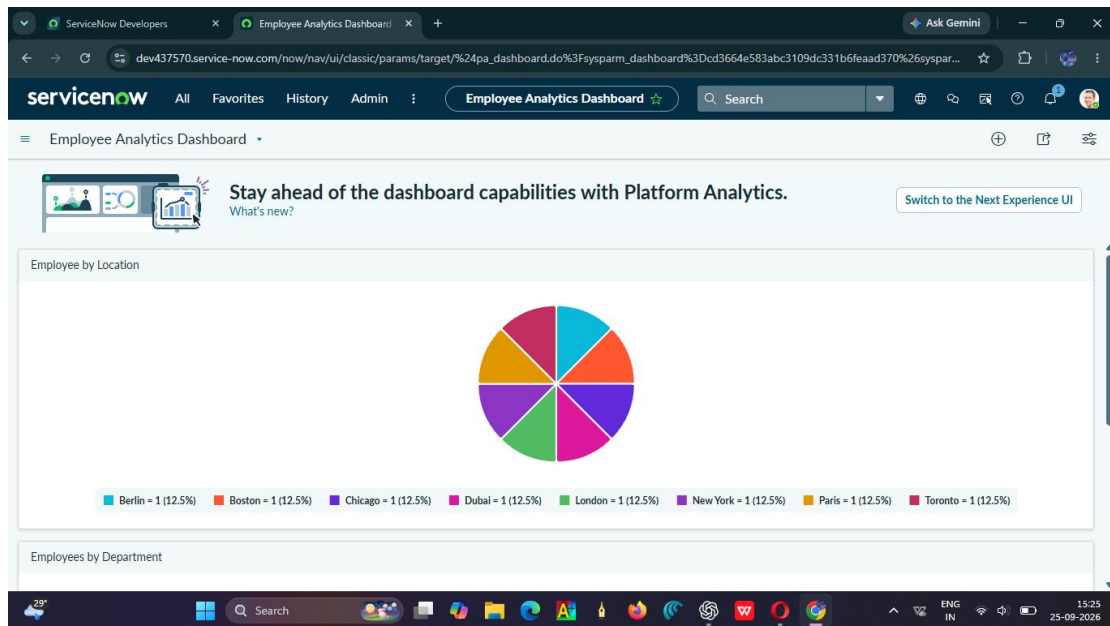

* End-to-End Automation: The project successfully implemented an automated, repeatable data ingestion workflow in ServiceNow using Import Sets and Transform Maps.

* Data Integrity: Leveraging Coalesce on Employee ID eliminated duplicate records, ensuring accurate record updates on repeated imports.

* Operational Value: Consolidating real-time charts into the Employee Analytics Dashboard provides HR teams and administrators immediate insight into departmental distributions, location allocations, and dataset trends without manual oversight.
